

Junior Software Developer / Engineer (Java) vacancy, Edinburgh

Salary in the region of £23,000 - £26,000

This is a fantastic opportunity for a Junior Software Developer / Engineer (Java) to work for a successful live event ticketing Software Company, providing software, services and consultancy to festivals and venues around the world.

They are the ticketing solution that drives the Edinburgh Festival Fringe (the largest arts festival in the world), the Garden of Unearthly Delights in Adelaide and the National Arts Festival of South Africa as well as other UK and International events.

They use a wide range of innovative technologies that provide the best solutions for event sales, data capture and distribution. This includes a number of unique capabilities that enable their clients to provide a high class service and an excellent customer experience.

The Junior Software Developer / Engineer (Java) will work with the Lead Developer to extend and enhance their market leading software. This role will introduce you to a wide range of both exciting new technologies, as well as more mature platforms such as Java Enterprise Edition.

Working within a small vibrant team, you will be providing input into the whole product development process. Their investment in technology provides the successful applicant with a unique opportunity to not only learn, but also gives great scope to influence the Software products of the Company.

Responsibilities of the post include:

- Software Development experience in a commercial environment
- Be involved with designing code and contribute to the evolution of the code base and the product
- Ability to work and contribute within a small innovative team environment to deliver development requirements
- Creating technical specifications and implementation plans for code

- Review completed development work to ensure it meets agreed specification
- Undertake technical testing of new releases
- Pair programming with other developers when required

Essential skills and experience:

- Software development experience in a commercial environment
- Strong analytical and problem solving skills with a focus on results
- Ownership and responsibility for the work you deliver, the ability to work to deadlines and be focused under pressure with strong communication and interpersonal skills
- Clear understanding of Java and Object Oriented Design
- Experience with relational databases
- SVN or equivalent version control system

Preferred Additional Skills:

- Experience of Java Enterprise Edition
- PHP
- Knowledge of SCRUM
- Selenium and FEST testing frameworks
- HTML5
- JBoss AS7 or equivalent Java Application Server
- Apache Maven
- JUnit
- Unix / Bash commands
